

X Media Report

Feature & Competitor Research Report

1. Scope

Reviewed the internal source code (authoritative for X Media Grabber's actual status) and public Chrome Web Store / GitHub listings of comparable extensions.

2. Existing Features (X Media Grabber)

- **Detection:** works on x.com and twitter.com; parses X's own GraphQL/fetch responses (no extra scraping); covers Home, Search, Bookmarks, Likes, User Media, and threads; supports original-size images, highest-bitrate MP4, and GIF-as-MP4.
- **Single-post download:** action-bar button; left-click opens a per-item selection preview; right-click downloads instantly; Shadow-DOM preview with lightbox; one failed file doesn't block others; re-downloading a successful post requires confirmation.
- **Batch & ZIP:** popup scans the active tab (Scan button, no auto-scroll); filters by saved/repost/media type; sequential download with progress; ZIP bundling via an offscreen document. Note: ZIP always force-redownloads, unlike the single-post confirm flow — this difference should be documented for users.
- **Threads & reliability:** self-thread detection ordered by Snowflake ID; "Download entire thread"; exponential-backoff retry (up to 3x, 500 ms–4 s cap); local IndexedDB history; duplicate warning by post ID.
- **Settings:** custom Downloads subfolder; optional per-file save prompt; filename template with tokens; synced via chrome.storage.sync; EN/VI/Simplified-Chinese UI; stats dashboard with 30-day chart and top accounts.
- **Account & entitlements:** Google OAuth sign-in; downloads gated by an active subscription (5-min cache, 24-hour offline fallback); optional post-issue reporting behind a build flag.
- **Boundaries:** only downloads media X already exposed to the tab (no bypass of protected/restricted/deleted content); batch is tab-scoped, not a full profile scan; ZIP holds data in-browser and needs size guardrails.

3. Competitor Research

Product	Confirmed Features	Adoption / Rating / Pricing	Key Implication
Media Harvest	One-click image/video download from Twitter/TweetDeck; custom filenames, shortcuts, sensitive-content auto-reveal. Explicitly NOT a crawler — no batch/ZIP.	~100,000 users, 4.5/5 (1.2K), free, updated 2026-06-18	Confirms one-click is the baseline; batch/ZIP is real differentiation, not an oversight on their part.
Twitter Media Downloader	Claims HD tweet/profile downloads, privacy-first messaging.	~616 users, 3.2/5 (8), freemium — free tier + paid Pro for unlimited/faster batch, updated 2026-04-26	Only competitor tying batch to a paid tier — a useful reference for monetization boundaries.
X-Media Downloader (GitHub)	Side Panel with real-time capture, Shift multi-select, category folders, 3-mode dedup (ID / thumbnail URL / pHash), persistent Download Center with retry & resume, history heatmap, "Boss Key" quick-hide.	2 stars / 1 fork, not on Chrome Web Store, MIT license	Richest feature set but smallest measured adoption — treat as a UX reference, not proof of demand.
Twitter/X Media Batch Downloader	Account-level original-quality download; requires a user-supplied auth_token (account-suspension / rate-limit risk).	469 stars / 43 forks, GPL-3.0, multi-channel (desktop + Chrome extension +	Strong signal for account-level demand; do not copy

Product	Confirmed Features	Adoption / Rating / Pricing	Key Implication
		userscript + web app), v4.8 (2026-07-05)	the token-extraction approach.

4. Comparison Matrix

Yes = verified · Partial = present but different scope · Not disclosed = source did not state it (absence not implied)

Capability	X Media Grabber	Media Harvest	Twitter Media DL	X-Media DL	Batch DL
One-click on-page	Yes	Yes	Not disclosed	Not disclosed	Not disclosed
Batch in current tab	Yes	No (explicit)	Not disclosed	Yes	Yes, by account
ZIP archive	Yes	No (explicit)	Not disclosed	Not disclosed	Not disclosed
Self-thread download	Yes	Not disclosed	Not disclosed	Not disclosed	Not disclosed
Side Panel / persistent queue	Not yet	Not disclosed	Not disclosed	Yes	Not disclosed
Dedup beyond post ID	Not yet	Not disclosed	Not disclosed	Yes (URL, pHash)	Not disclosed
Pricing model	Subscription	Free	Freemium	Free / OSS	Free / OSS
Measured user base	Not disclosed	~100,000	~616	2 stars	469 stars

5. Gaps & Priorities

P1 — High product value

- Optional Side Panel for persistent media capture while scrolling.
- Durable Download Center: queue states, per-task retry, resume after service-worker restart.

- Opt-in dedup beyond post ID — thumbnail-URL first; perceptual hash only after a cost/privacy review.
- Shift-click multi-select and keyboard shortcuts for faster workflows.

P2 — Controlled expansion

- User-driven, rate-limited profile download sessions — no extracted tokens or cookies.
- Folder presets by account/date/type alongside the existing filename tokens.
- Local history export (CSV/JSON).
- Minimal, off-by-default quick-hide shortcut for the popup/preview, inspired by "Boss Key" but implemented cautiously.

6. Conclusion

The original report already satisfied the "research similar Chrome plugins and write a report" request. The main upgrade was adding adoption and pricing data, which reframes prioritization — for example, the most popular competitor deliberately skips batch/ZIP, confirming it as a genuine differentiator rather than a feature to add cautiously.
